SAGAR TARSARIYA

+91-6355274348 ◇ Surat, Gujarat

OBJECTIVE

A Data science graduate passionate about analyzing business & financial data to improve performance. Seeking a role as a Data Analyst to apply my programming, SQL, and visualization skills to help organizations leverage data-driven insights for growth.

EDUCATION

M.Sc. Agriculture Analytics (CPI: 8.13/10.00) 2022 - 2024
Dhirubhai Ambani Institute of Information & Communication Technology (DAIICT), Gandhinagar
Coursework: Python, SQL, Data Visualizations, Machine Learning, Deep Learning, Statistics

B.Sc.(Hons.)Agriculture (CPI: 8.098/10.00) 2018 - 2022
Anand Agricultural University, Anand

SKILLS

- **Financial Analytics :** Options Data Analysis, Backtesting Strategy Development, Algo Trading(ROBO Trading),Market Data Processing Cleaning, Trading Dashboard Development,Financial Reporting Excel Automation, Time-Series Analysis Performance Metrics
- **Programming Languages :** Python, R.
- **Database Languages & Tools :** SQL (Postgres), NoSQL (MongoDB)
- **Analytics & Visualizations Tools :** Power BI, Tableau, MS Excel.
- **Tools & Frameworks :** Stockmock, Polars, NumPy, Pandas, Matplotlib, Seaborn, Scikit-Learn, OpenCV, Keras, NLP, KNN, SVR, Image processing, Linear Programming,

EXPERIENCE

Financial Data Analyst July 2024-Present
SucessSure, Surat
Working extensively on financial market data, backtesting systems, and dashboard development for NIFTY, BANKNIFTY, and SENSEX datasets.

- Processed, cleaned, and analyzed large options datasets using Pandas and Polars to generate Daily Analysis and strategy insights.
- Developed advanced backtesting engines with dynamic SL logic, ITM/OTM selection, numeric conversion and data errors fixes, and automated analysis handling.
- Optimized heavy scripts for speed and accuracy, resolving issues related to datatypes.
- Delivered complete solutions used for daily trading analysis and performance decision-making.
- Built full-stack trading dashboards using Flask, HTML, CSS, and JavaScript with multi-index filtering and formatted Excel export.

Data Analyst Intern Jan 2024-June 2024
Tata Consultancy Services, Thane, Maharashtra
During this role, I developed a Python-based model to assess the risk of unwanted cross pollination in hybrid farm plots. The model utilized crop names, sowing dates, and farm boundary shapefiles to analyze spatial, temporal, and mechanical isolation factors. Key achievements include:

- Gained hands-on experience in managing live projects, handling real-time data, and performing complex data analyses under tight deadlines.
- Learned to apply advanced analytical techniques in a practical, problem-solving context, enhancing my proficiency in Python and geospatial analysis tools.

- Improved cross-functional team collaboration skills by working closely with data scientists to refine project objectives and outcomes.

PROJECTS

• Advanced Options Strategy Backtesting Engine

Developed a high-performance backtesting engine using Python (Polars/Pandas) for multi-year NIFTY, SENSEX, BANKNIFTY options with dynamic SL, ITM/OTM rules, and PNL computation.Optimized pipelines, automated numeric/date corrections, and enabled accurate comparison of complex strategies across market conditions.

• Full-Stack Financial Trading Dashboard (Flask + JavaScript)

Designed an interactive dashboard with multi-index filtering, strategy insights, formatted Excel exports, and automatic holiday logic. Integrated Flask APIs with a clean UI to support fast, visual analysis for traders through PNL and table-based insights.

• LAI Estimation through Vegetation Indices using Hyperspectral Dataset

Harnessed hyperspectral data and cutting-edge machine learning tools **(XGBoost, LR, RF, SVR, KNN)** to advance LAI estimation, achieving a remarkable **R2 score 0.87, RMSE 0.3436 and MAE 0.2250** using the KNN algorithm.

• Landmark Detection with Machine Learning

Developed a **Python**-based landmark detection system using **neural networks**. Leveraged powerful libraries like **Numpy, Pandas, Keras, CV2, Matplotlib** to enhance accuracy and efficiency. Trained the model on a diverse dataset of 20,001 samples, representing 1,020 landmark classes, resulting in an average of 19.6 images per class, ensuring robust and precise landmark detection.

• Mango Leaf Disease Classification Using Deep Learning:

Implemented and trained a CNN model, achieving high accuracy **0.93 on test data** in classifying various disease categories, and demonstrating proficiency in image processing.Organized a dataset of 4,000 mango leaf images with 8 disease categories,including healthy leaf category .

• HR Analytics Dashboard using PowerBI

Developed an **Analytics Dashboard** to enable data-driven decision-making, incorporating **Exploratory data analysis**, interactive visualization design, and building. Improved **decision-making** by providing data-driven insights and enhancing visualization through the development of the dashboard.

CERTIFICATIONS

SQL for Data Science (Great Learning)
Machine Learning Algorithms (Great Learning)
The Product Management Course (Udemy)
Python for Data Science and Machine Learning (Udemy)
Product Management of Geospatial Data Products (Satsure)
Data Analytics and Visualization Using PowerBI and Tableau (Analytics Vidhya)

INTEREST

Travelling & Trekking
Playing Kho-Kho & Chess
